

# Improve your productivity

Cut down your costs, boost your profitability

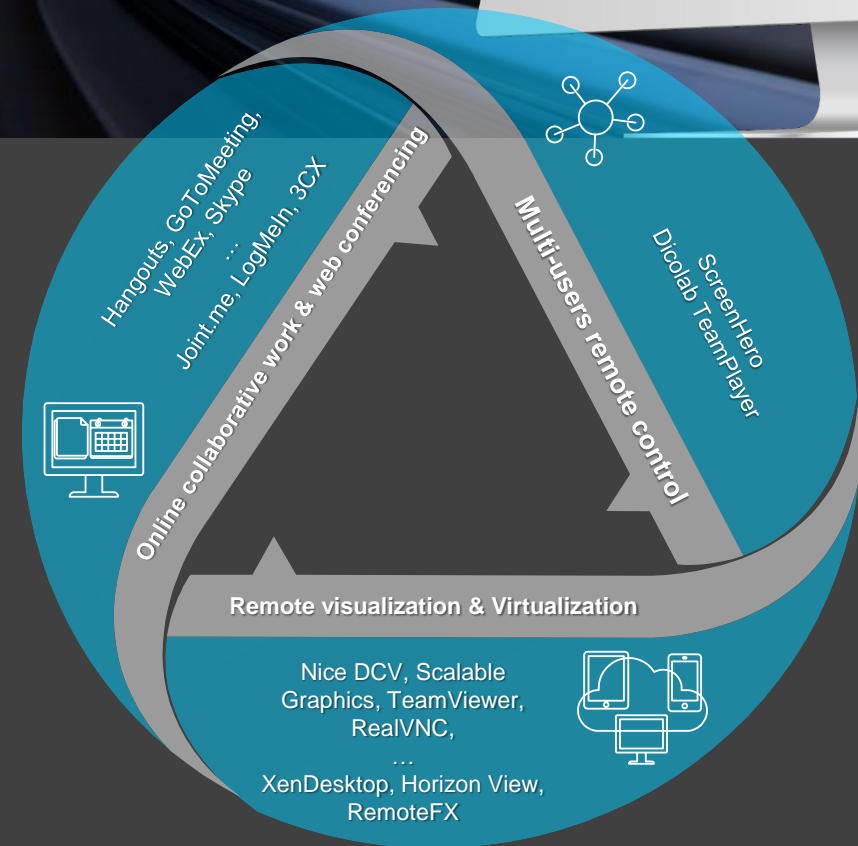

## In a nutshell

### Enhance your communications by sharing all your applications

USE is a secure multi-user collaborative system allowing professionals to share their applications and data in real time, accessible from any device, over any network.

- User QoE: HD in real time with low latency
- Collaborative: *video, audio* and chat
- Multi-devices: on workstation, laptop, tablet or mobile
- Zero-client deployment: based on standards such as WebRTC, HTML5
- Security: no data transmission only pixel, P2P architecture with encrypted streams
- Flexibility of use: SaaS, on-premise, host-to-host

## An ideal management tool for project manager

USE integrates a teleworking solution saving you travel time and money by allowing users to host web meetings and enjoy face-to-face communication wherever they are.

To work remotely with your favorite applications

- project review
- synchronous co-design
- simulation and visualization
- ...

## A new virtual classroom tool

The ability to view the status of your students (« Presence ») is a great time saver avoiding unnecessary-face meetings and makes managing and working with remote students easier than ever.

To promote a new area for learning in the Digital Age

- cooperative digital workspace
- co-develop with others remotely
- flipped classroom
- ...

### A complete environment to share your queries and promote your results

USE provides a unified working environment for both exchange with your collaborators while handling your software code on remote HPC resources.

To work with your teams and partners on a collegial basis

- jointly annotate and navigate in your data
- engage your HPC resources on your device
- visualize and interact with your simulations remotely
- ...
