Predictive Maintenance & Machine Learning: Best Practices and Approach for industrial client

AGENDA

- 
- Digital Transformation in Industry : AI & ML as disruptive technology
 - Predictive Maintenance & Machine Learning: Illustration
 - Q/A

More or less all industrial companies need to cover the **same cycle** and address similar challenges

Virtual & Digital Space
« World of plans, requirements, simulations, forecast .. »

Physical Space
« World of Things, Machines, humans, objects ... »

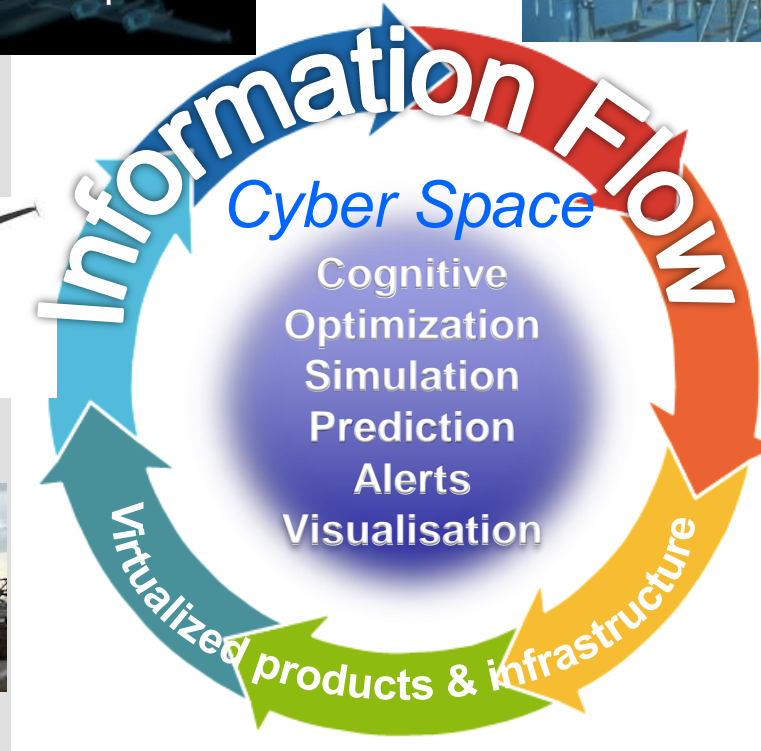

Within 2 to 3 years, leading industrial companies will have in place a **near real-time feedback loop** between product usage & engineering

Data as „intangible assets“

Decentralized, self-controlled Systems & processes

Supply Chain

Efficient Change Management Processes & Impact Analysis

Physical Space

IoT Feedback Loop

Efficient information flow

Technology is leading the digital transformation

Data, Infrastructure, Computational Power & Connectivity

Internet of Things & Devices

Big Data & Object Storage

Container Approach, server-less, hybrid-cloud

Blockchain

Analytics & Intelligence

Optimization Engine

Human-Machine interaction

Mobile

Virtual Reality & Immersion

Augmented Reality

Digital-to-Physical Conversion

Advanced robotics

Additive Manufacturing & 3D printing

Embracing Industrial IoT through logical steps of value

Gather the data

- Instrument your equipment/assets to collect data
- Gather already existing data from various sources

Connect assets, outfitted with sensor or data gathered

Visualize the patterns

- Visualize your data in meaningful dashboards
- Start to see patterns
- Build with Watson IoT solutions

Quickly build dashboards for data & process visualization

Advance to analytics

- Gain insights from the data
- Produce models, prediction, issue detection patterns
- Propose resolution and recommendations

Use analytical models to predict equipment failures and provide recommendations

Infuse with cognitive

- Refine models with cognitive machine learning
- Utilize other cognitive functions to improve engagement

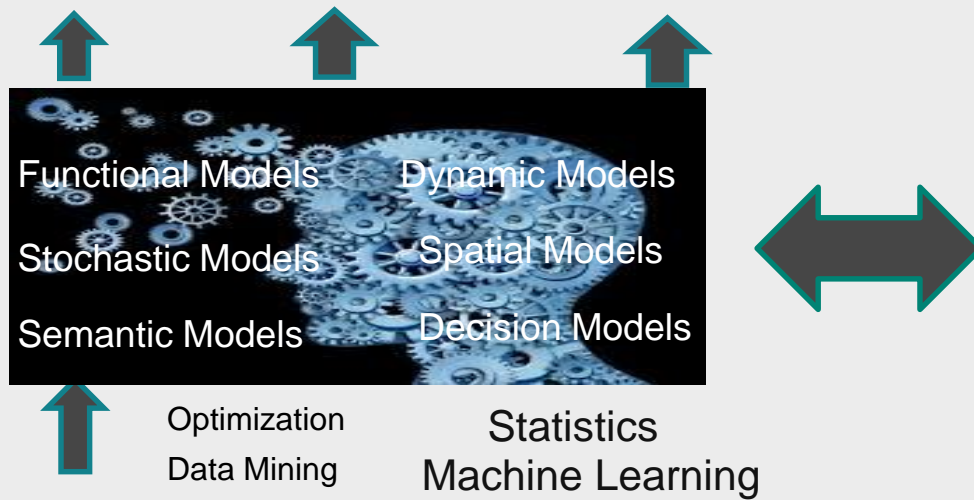

Use speech, video, image to diagnose complex problems

What has happened? What could happen? How to achieve the best outcome?

A mathematical view of data analytics and cognitive

Descriptive Predictions Prescriptions

Cognitive
How can we understand and learn?

Structured data – continuous, discrete, categorical

Unstructured data

Text Processing
Natural Lang

Signal Processing
Images, Video, Voice

Extreme "Unstructuredness"

Source/Quarries

Assets

Plants

Ready-Mix Plants

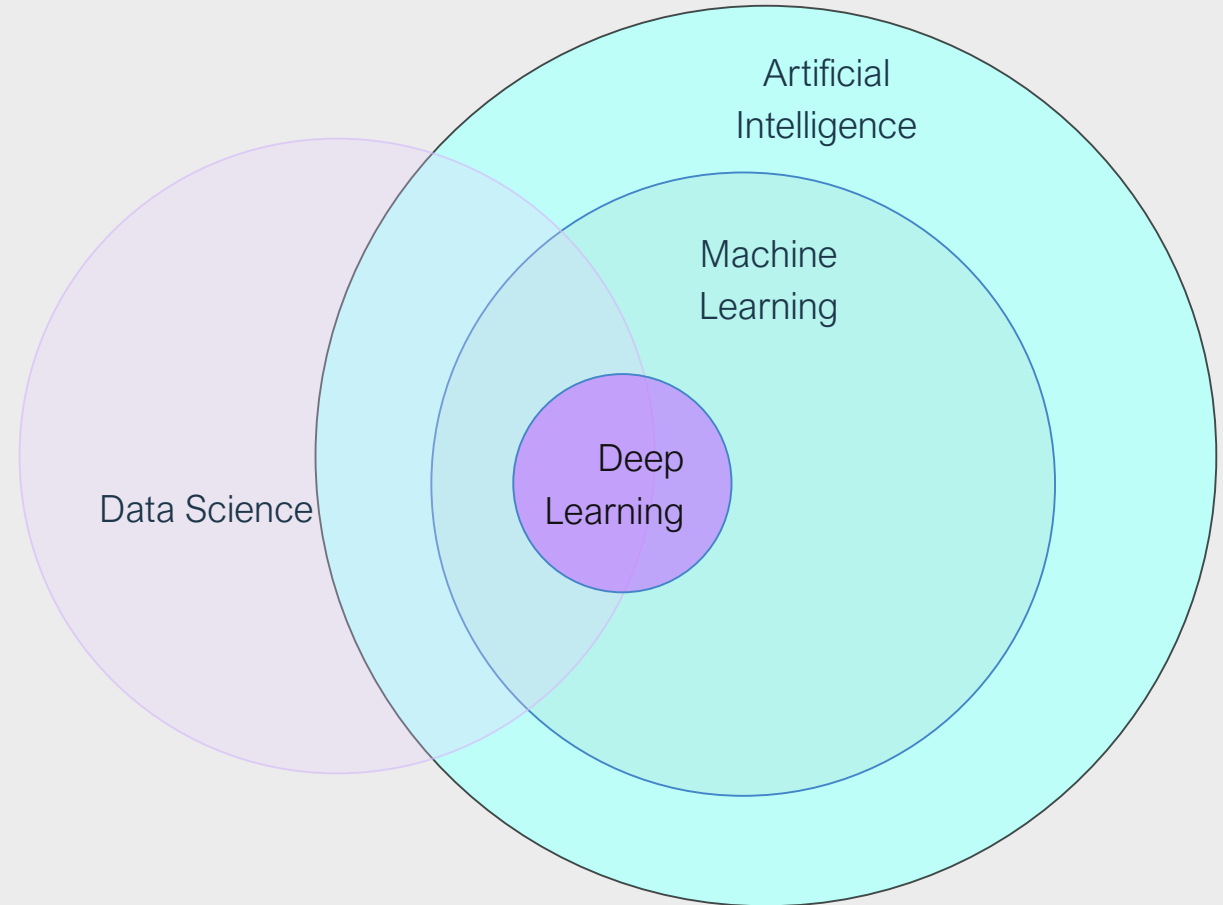

Transportation

Clients

Deep Learning & Machine Learning

- Machine learning is a set of algorithms that **learn patterns in data without explicit programming** to **optimize an internal representation** then **make predictions** about a target state.

The Value of Analytics & AI

Image Analytics

Enables monitoring of unstructured data from images snapshots to identify quality defects and failure patterns

Machine Learning

Automates data processing, identifies the best model for the data and continuously monitors new data to learn and improve results

Textual Analytics

Enables mining of textual sources to find correlations and patterns in structured and unstructured text such as logs and notes

Acoustics Analytics

Utilizes audio as an additional source of unstructured data to enable anomaly detection and pattern recognition

From data to actionable items to deliver business value

Example of Predictive Quality

Low Business Value

Statistical

Historical Data

One of these parts will need rework every month.

Possible Approaches

Predictive

Historical Operational Data

+

Real Time Sensor Data

We will have a quality issue on this specific part in this time frame.

Cognitive

(Our Approach)

Historical Operational Data

+

Real Time Sensor Data

+

Cognitive System

We will have a quality issue on this specific part & this is the remediation action to anticipate

Prescriptive

We have or we will have an issue AND there is an impact on production:
-> Production execution needs to be adjusted.

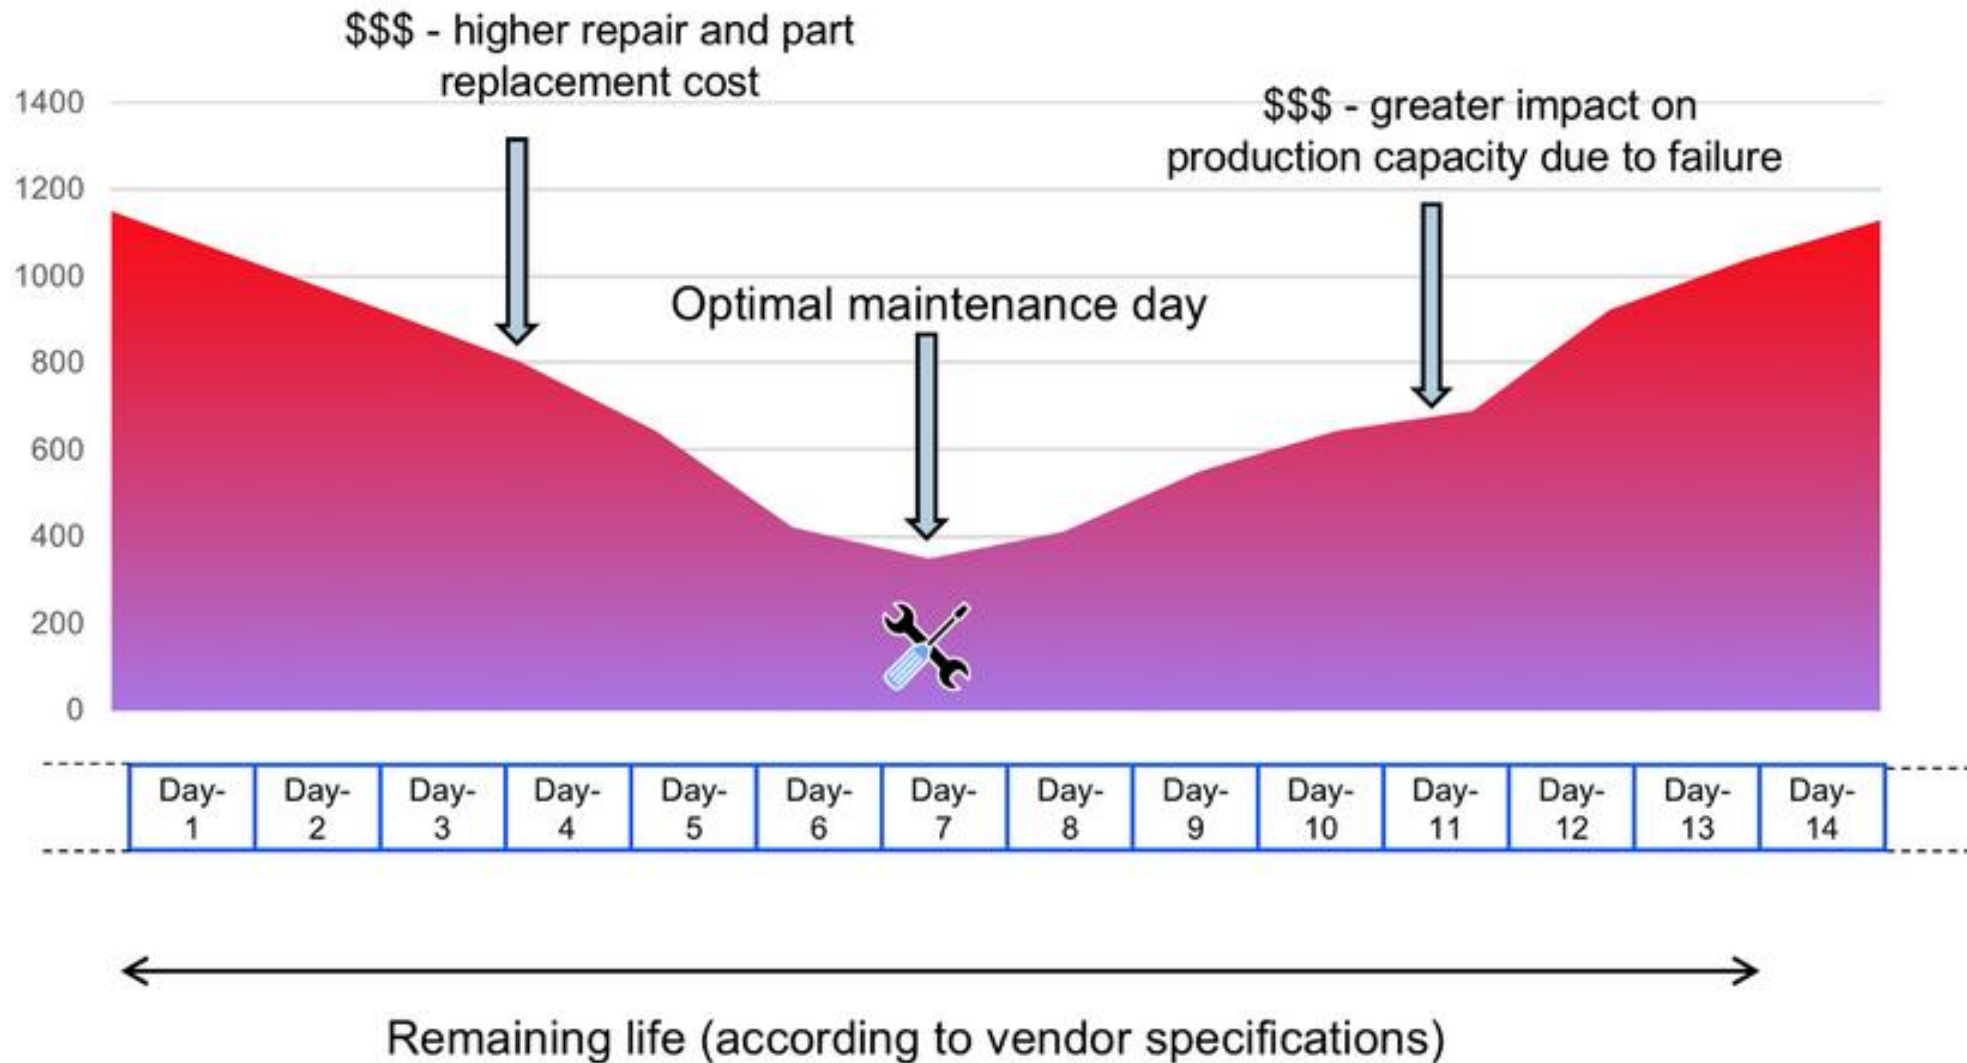

High Business Value

AGENDA

- Digital Transformation in Industry : AI & ML as disruptive technology
-  • Predictive Maintenance & Machine Learning: Illustration
- Q/A

Minimize expected maintenance cost

Maintenance Scheduling: What ML Can Do Well

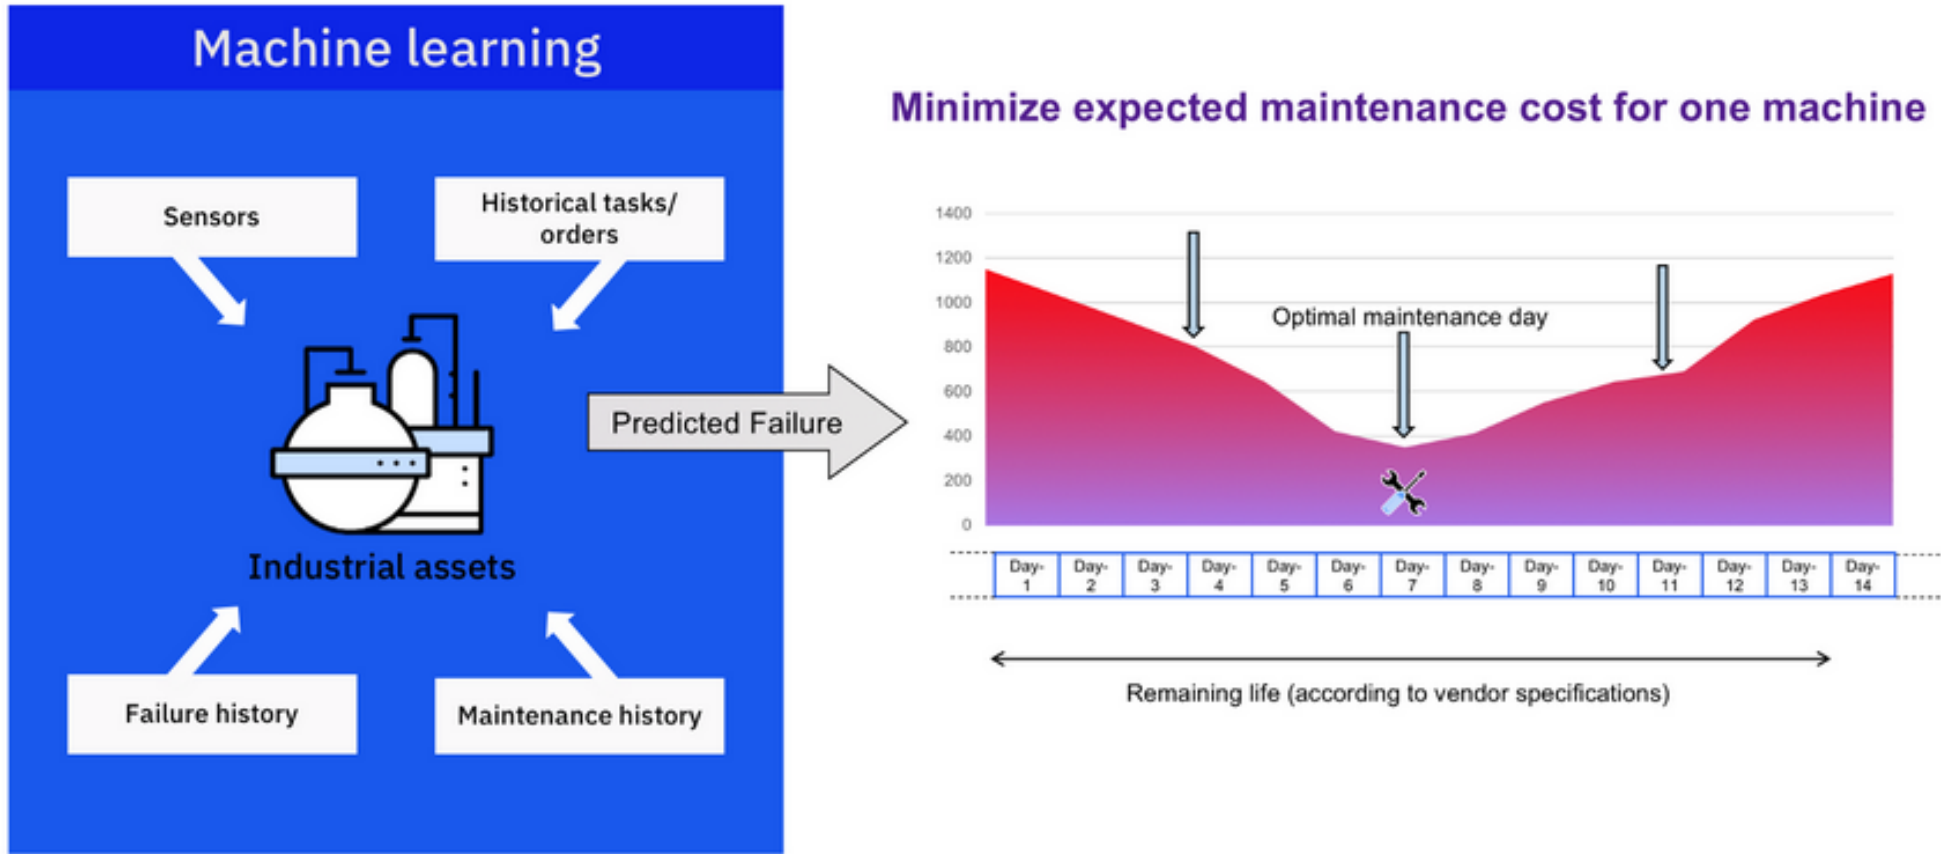

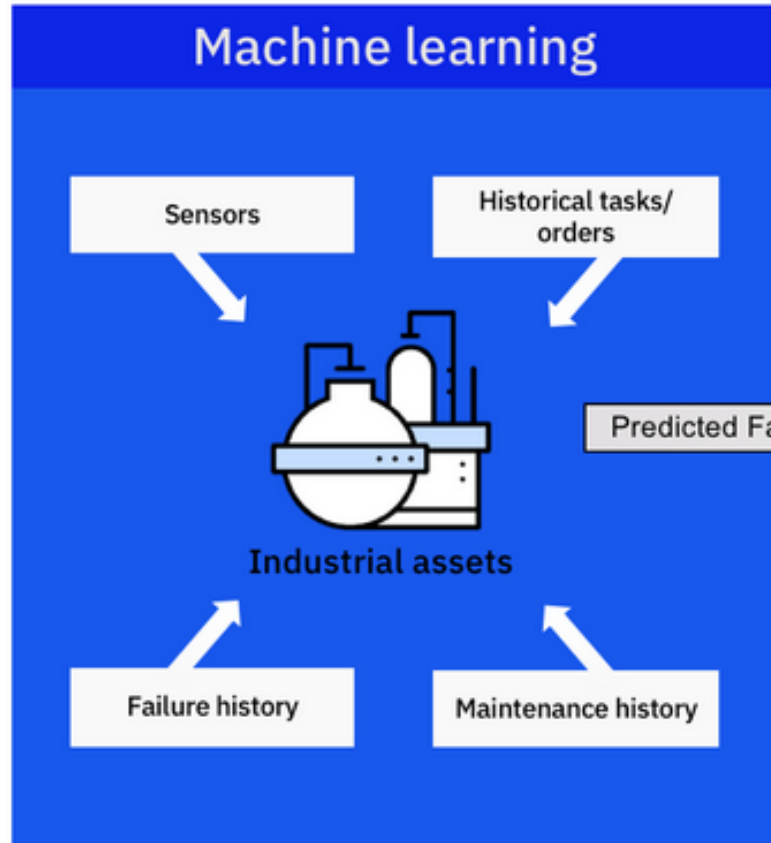

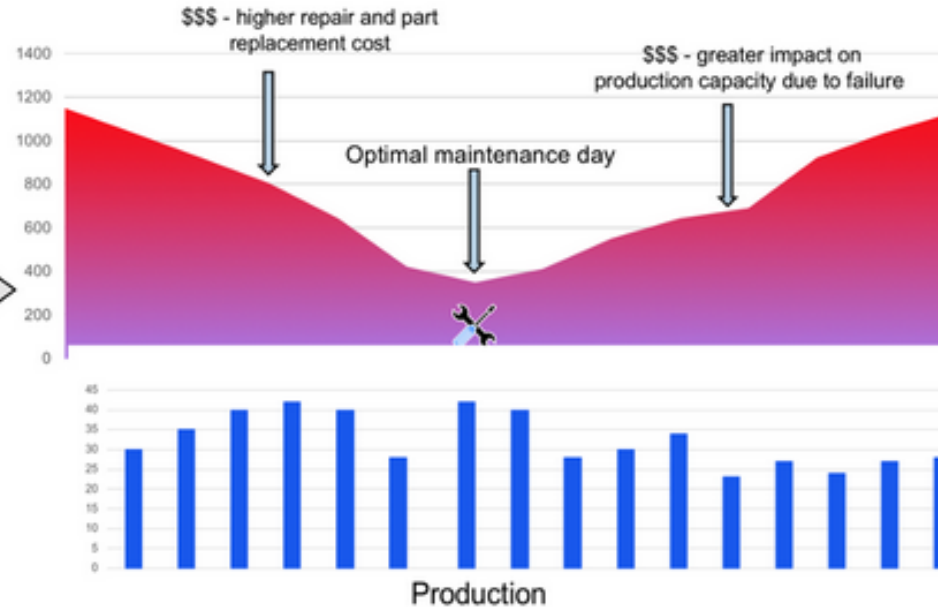

Figure 2: Predicting optimal maintenance day using ML (one machine at a time)

Maintenance Scheduling: Where ML Faces Challenges

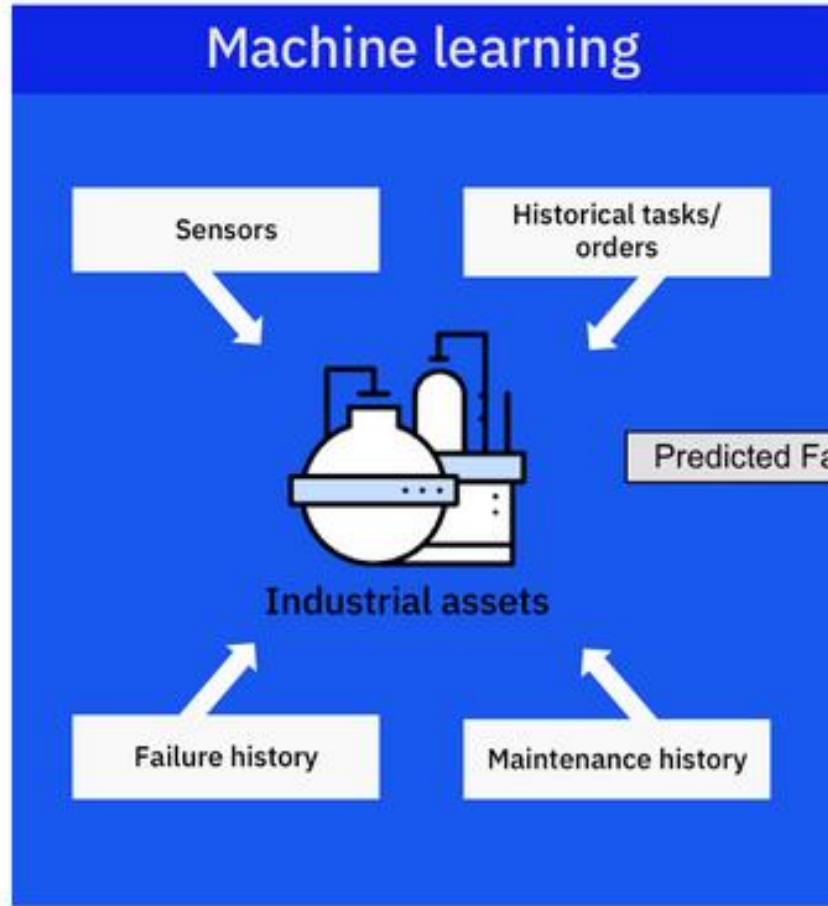

What if planned production is highest on "optimal" day?

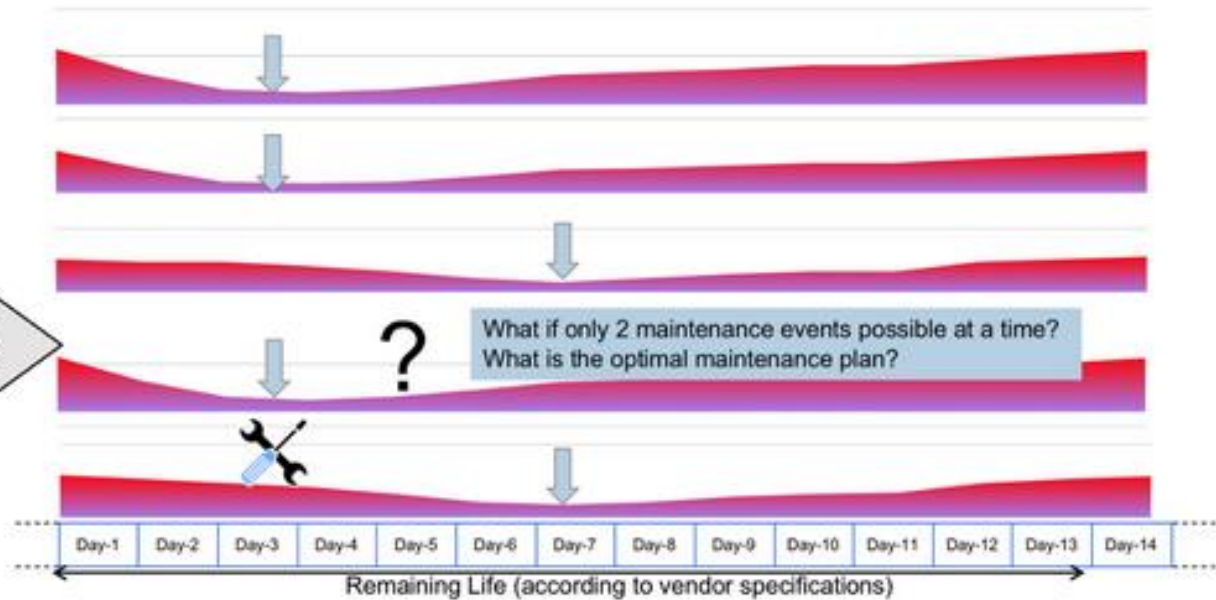

=> Less \$\$ to do maintenance a day early/late?

Figure 3: An "optimal" maintenance day may not be optimal if scheduled production numbers are high

Maintenance Scheduling: Where ML Faces Challenges

Minimize maintenance cost for a set of machines

How to deal with limited resources?

Maintenance Scheduling: ML and DO Work Best Together

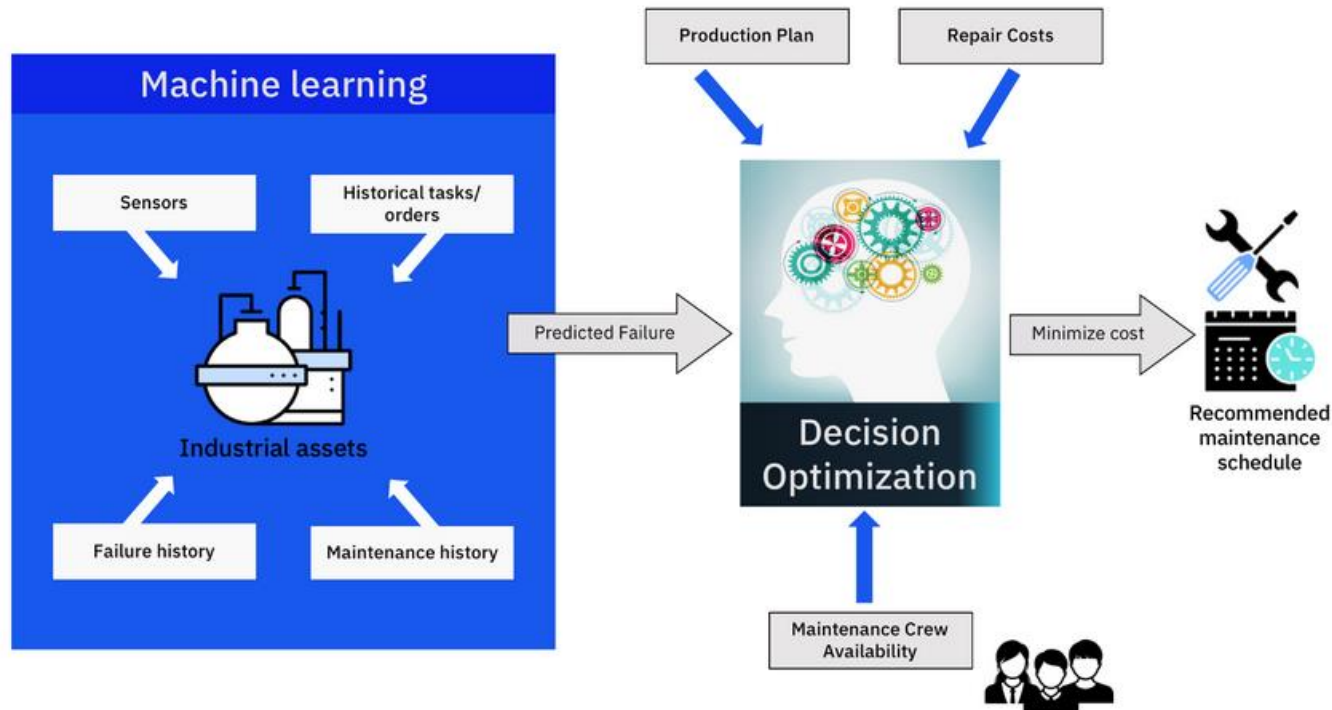

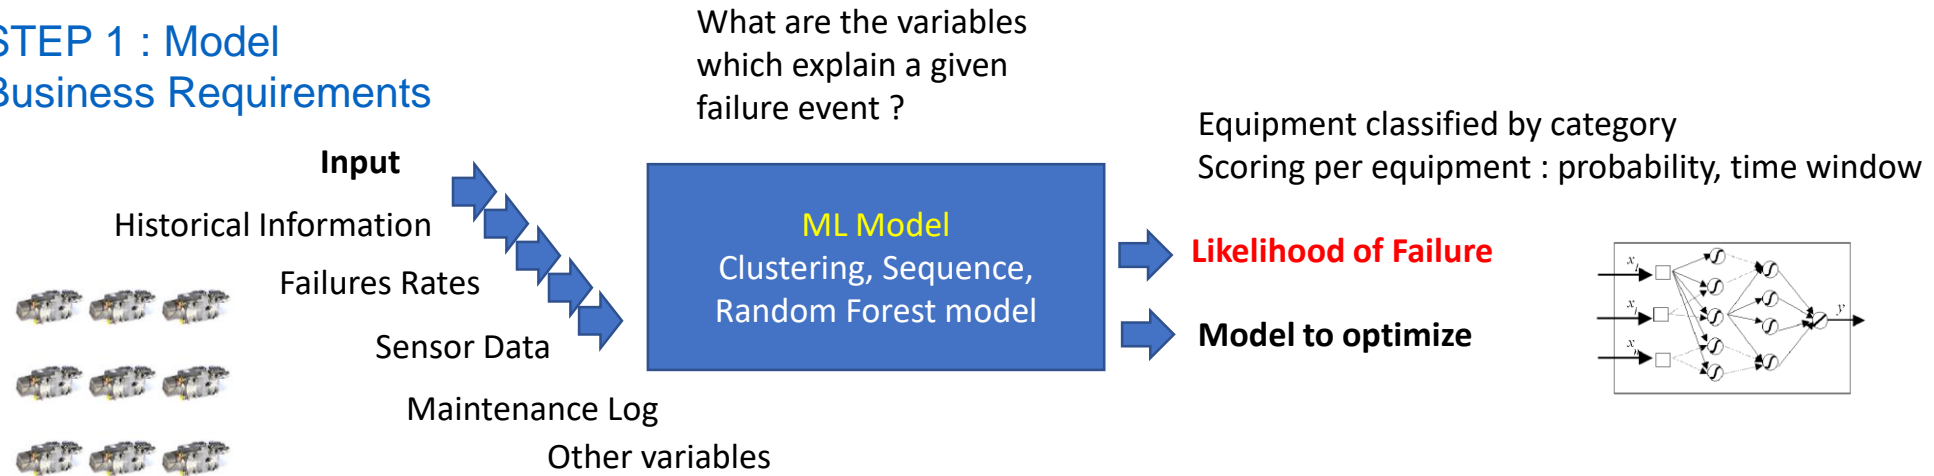

Figure 5: Combining the Power of Machine Learning & Decision Optimization for Maintenance Scheduling

- According to a study by the World Economic Forum and Accenture, the business value of a predictive maintenance solution is:
 - 12% scheduling costs
 - 30% maintenance costs
 - 70% unplanned downtime

Optimization & ML Combined Approach for predictive maintenance

STEP 1 : Model Business Requirements

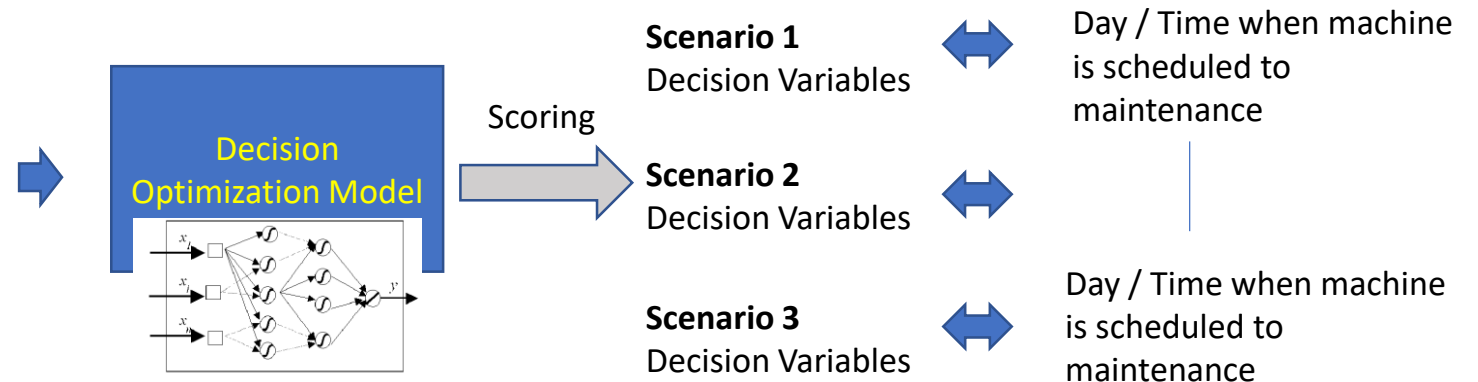

Optimization Metrics

- minimize cost (maintenance, labor)
- minimize late maintenance
- maximize production
- maximize customer satisfaction

Constraints

- **Predicted likelihood of machine failure (output of the ML model)**
- The impact of maintenance on production (we may want to avoid doing maintenance on days with highest planned production levels)
- Maintenance crew availability
- Machine characteristics (cost of repair, cost of remaining component life, etc.)

STEP 2 : Visualize and compare scenarios side by side

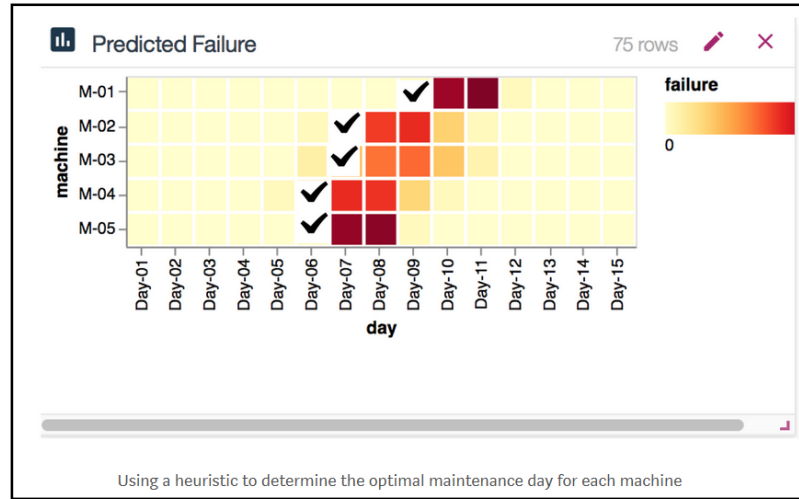

STEP 3 : Deploy the Models and embed them in your application

STEP 2 : Visualize and compare scenarios side by side

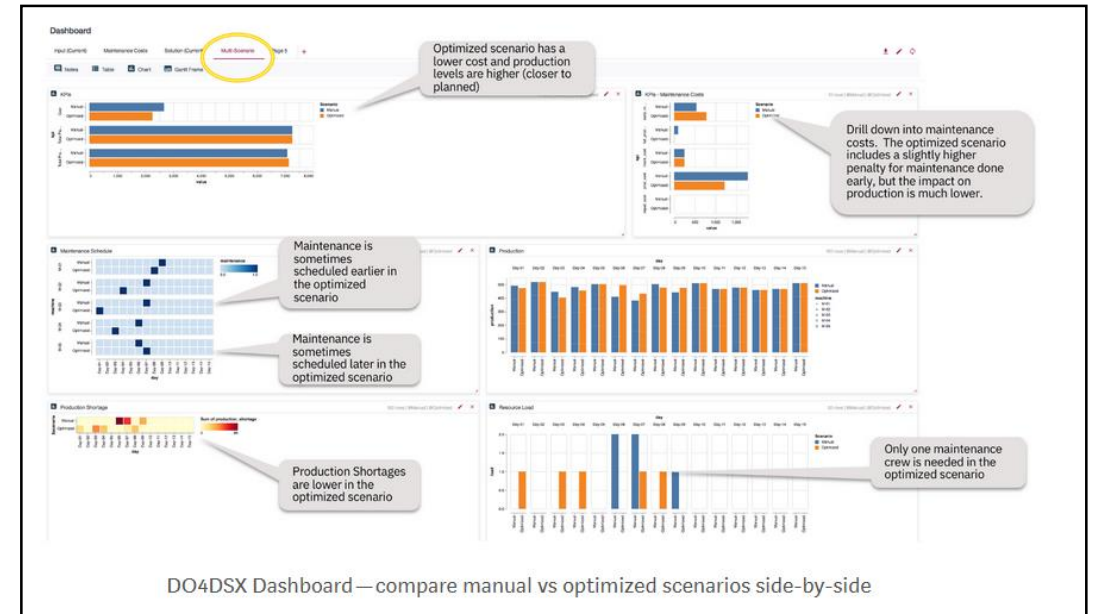

ML Model

Clustering, Sequence,
Random Forest model

Let's say we wanted to use a heuristic and schedule “right before it gets too red”, meaning the day before the machine is very likely to fail. We will treat this as our “Manual” scenario and define maintenance events as follows (checkmark indicates a maintenance event):

We also define an “Optimized” scenario with no fixed maintenance events and let the optimization engine determine the schedule automatically. After solving the two scenarios, we can compare the solutions side-by-side in the multi-scenario tab of the Dashboard:

STEP 3 : Deploy the Models and embed them in your application

Predictive Maintenance Demo

Load Data

DATA SET: data5

LOAD DATA

id	capacity	remaining life	cost of maintenance	maintenance loss	cost of repair	repair loss	loss per life day	production value unit
M-01	100	14	50	50	100	100	20	10
M-02	120	12	50	50	100	100	20	10
M-03	140	12	50	50	100	100	20	10
M-04	140	9	50	50	100	100	20	10
M-05	90	10	50	50	100	100	20	10

Planned Production

Load the data on machines and planned production

Predict Failure

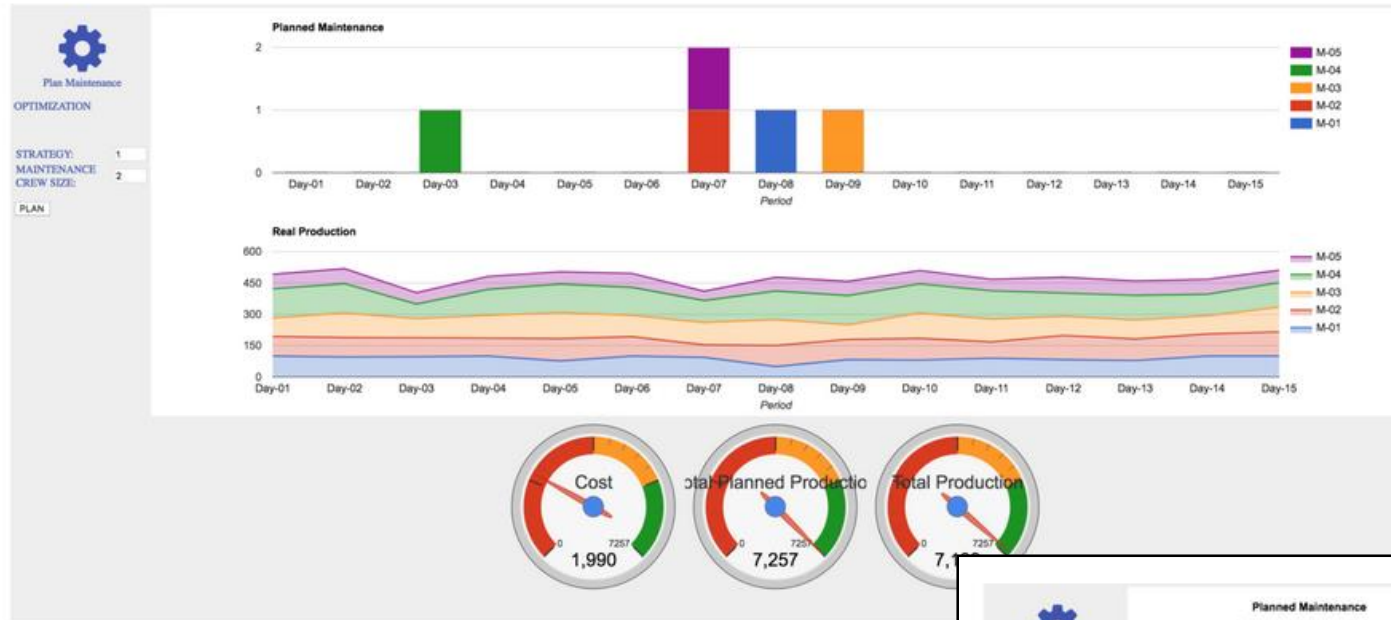

MACHINE LEARNING

PREDICT

id	predicted mid
M-04	6.689
M-05	7.395
M-03	9.052
M-01	10.84
M-02	9.009

PredictedFailure

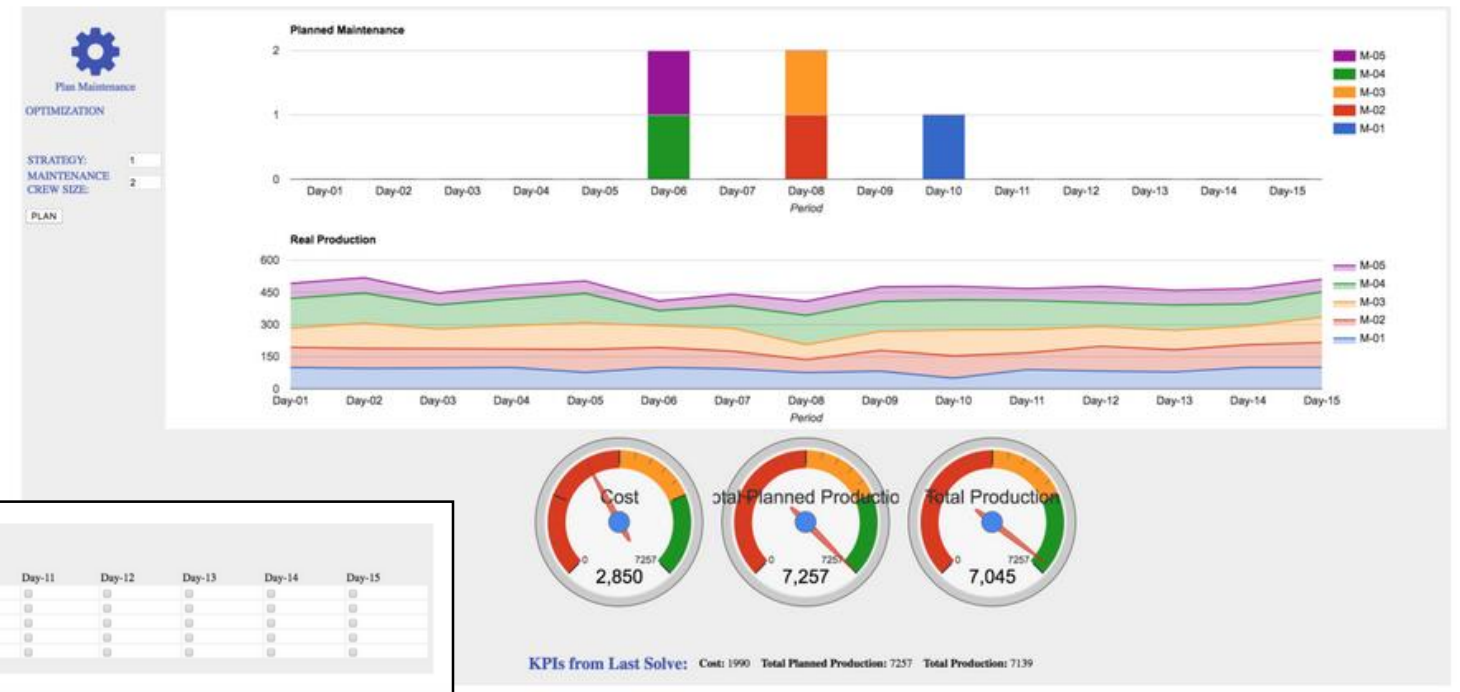

Connect to the executable ML service and obtain failure predictions

Connect to the online DO model and obtain the optimal maintenance

- Finally, we are ready to invoke the optimization service and generate the optimal predictive maintenance schedule in one click of a button:

- Now that we have obtained the optimal maintenance schedule, we can easily fix some maintenance events manually (equivalent to the “Manual” scenario in DO4WSL Dashboard, discussed above) by selecting them directly in the app:

Manual Planning

Specify fixed maintenance events, if any:

	Day-01	Day-02	Day-03	Day-04	Day-05	Day-06	Day-07	Day-08	Day-09	Day-10	Day-11	Day-12	Day-13	Day-14	Day-15
M-01	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
M-02	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
M-03	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
M-04	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
M-05	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Solving the Manual scenario (using a simple heuristic to schedule maintenance) and comparing the results

Solution : Equipment Advisor Show Case

Use Case: Watson IoT Edge AI Computing

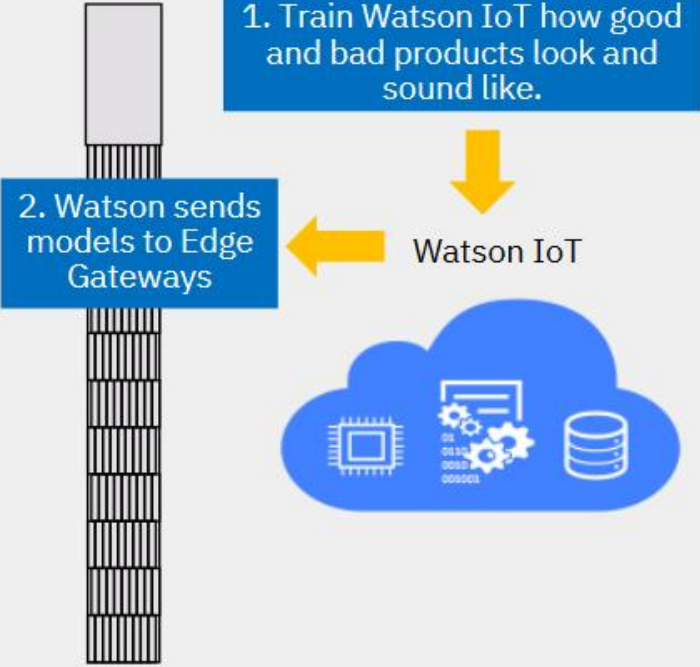

Private Eyes and Ears for Predictive Maintenance and Quality Control

3. Edge gateway checks quality using Watson-trained Models.
