ECLAIRION
AI infrastructure factory

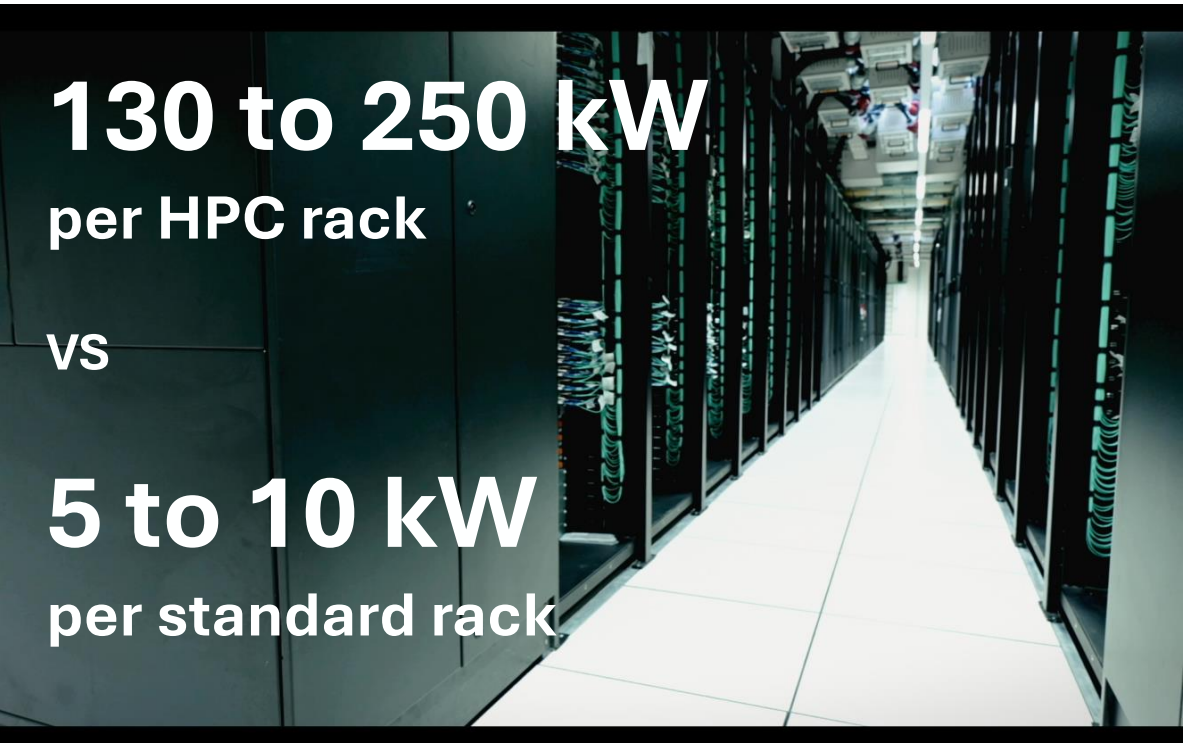

AI is also an infrastructure

Building the computing superhighways to preserve French digital sovereignty.

Time is running out: 3 to 5 years to secure our place in the race.

AI Factory: an infrastructure designed for high-performance computing

Thought from beginning to end:

- Electricity
- Liquid cooling
- Redundancy
- Safety

Sovereignty begins first with the physical layer

The ground	**Energy**
Applicable law	**Operational control**

Without control of the physical layer, there is no real sovereignty.

Accelerate without compromising requirements

- **To preserve:**
  - **Security**
  - **Sovereignty**
  - **Environment**

To be unlocked:

- **One-stop shop**
- **Set deadlines**
- **Sovereignty criteria**
- **Fatal heat**

A window of opportunity, in the face of global competition

United States: Massive Investments & Rapid Deployment

China: State Strategy & Vertical Integration

Europe: Growing Market & Fragmentation

France: Real Strengths & Short Window of Opportunity

France can play a central role in Europe, provided it accelerates.

Industrial projects that matter to the regions

Employment: Skills & Sustainable Jobs

Economy: Taxation & Local Procurement

Land: Brownfield Redevelopment

Environment: Measurable Indicators & Integration

A well-designed project is prepared in conjunction with its territory.

AI clusters

Our sites under development, provisional total: 75 MW + 120 MW + 150 MW + 250 MW + ...

2026–2030:
THE TIMELINE IS BEING DECIDED NOW

Five decisions to unblock the trajectory

1. **One stop shop**
2. Maximum processing and connection times
3. Sovereignty criteria in purchases and support
4. Creation and support of a dedicated industrial sector
5. A clarified and stable environmental framework

- Facilitate what is strategic — not facilitate everything.

ECLAIRION
AI infrastructure factory

The choice: build our computing superhighways!

Critical infrastructure.
Sovereignty to build.
Decisions to make now.
